

MCS-022 : OPERATING SYSTEM CONCEPTS AND NETWORKING MANAGEMENT

Networking protocol (win 2000)
Token Bus Network
Token ring

Kerberos 11

Multimedia OS

OSI model 11

Repeaters

Protocols

features
components
implementation

PSec 111

CSMA/CD protocols 11

Simplex, Half duplex,
Full duplex communication

Symmetric and asymmetric
Cryptography 111

LAN 11, man and wan

Packet filtering gateways
and stateful filter

user mode 1/1/

kernel mode 1/1/1

kernel components

Networking topologies 1/1

TCP/IP 1/1

design
goals
priority

DNS

DNS Architecture 1/1/1

DNS zone

cat, diff, root, comp

Repeater 1/1

Hub 1/1

Bridge 1/1/1

Router

gateway 1/1/1

Hardening (windows 2000)

firewall 1/1

packet switching

Unguided transmission
media

MULTI threading

hw 1

Batch processing

Distributed OS 11

Optical fibre

Network

modems

optical fibre

IR (Infrared Transmission)

OS 1 model

TCP/IP Protocol 1111

↓
configuring windows

Shell scripts 11

Network File Services

Backup and Restoration

IDS (Intrusion Detection System)

Fault Tolerant System 11

Power Aided

Trust Relationships

DFS Services (Windows 2000)

Registry Management 71

Windows 2000 Domain 11
Management

IPv4 Class Formats

Advantages of VPN || ||

Shell script to delete
temporary files after 24hrs

NTFS, FAT16, FAT32 || ||

Mandatory Access Control
and Discretionary Access
Control ||

print server

proxy server

RAID || ||

(> RAID levels)

Limitation of disk striping

Purpose

/bin

/dev

/etc

/lib

/sbin

/tmp

/usr/bin

/mnt

Layered Architecture

File permission modes
and changing them

Pipes and filters |||

Logical and physical
Structure of a domain.

FTP

TFTP |||

TELNET 11

Modems

Virtual memory in linux 11

mapped drive (win 2000) 11

Network

11 11 Distributed and Real time
multi processor
operating systems

Virtual machine

Active directory

Diagram Approach

Virtual circuit Approach

SNMP application network

11 } UDP

map network resource to drive
letter

Windows Explorer

Hybrid Network Topologies

Process and Thread
management (Linux)

Transmission media in
Networking.

Guided and unguided

1) Transmission media with
advantages and disadvantages

User authentication methods

Registry Management

1) Backup and restoration

Memory management
(Linux)

windows 2000

Existing user accounts
modifications
managing user profiles
Group Accounts Admin
Audit

File management Linux

TTF (OS)

Data structure and thread
(in linux)

/etc/shadow

why is it readable only
by root.

msg comment

Un casting, mult casting
and broad casting

Topology
mesh, star

Data terminal and Data
Communication Equipment

Encrypt a file EFS
Windows XP.

Roaming user profile

Backup

Group Policy
